

# KMNK Online Food Ordering

12.20.2017

---

## Who:

Matthew Penington

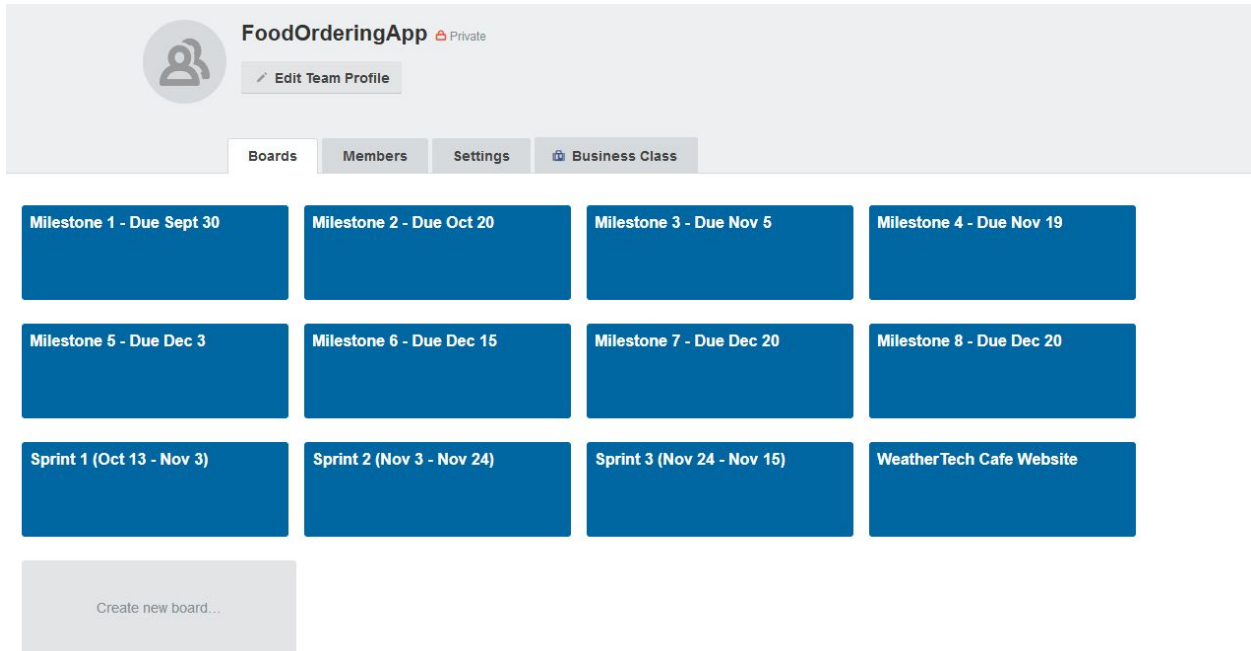

Kira Johnson

Kevin Yang

Nicholas Mozdier

## Project Tracker

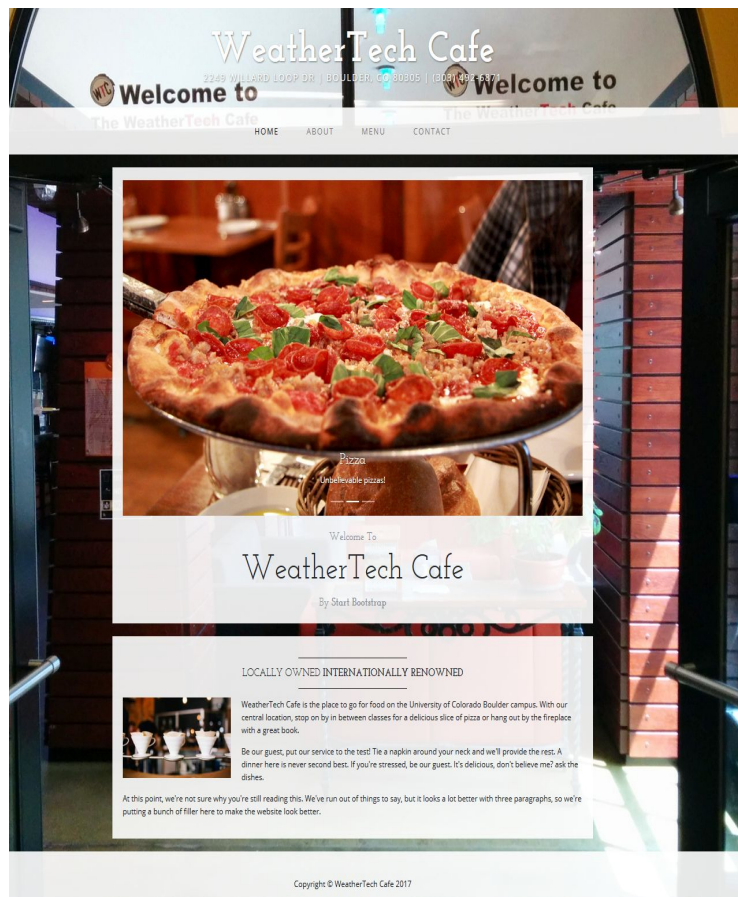

For our project, we used Trello as a project tracker. That being said, we did not find Trello to be very useful for that purpose due to the way that we divided up the project. A link to the board can be found [here](#).

VCS (<https://github.com/nmozdzier/kevra-nichothew>)

## Deployment

For our deployment, we used a Rails server in a virtual machine to host the Ruby code for our website. This includes the menu pages, the login page, and the cart. For the Home page, the Contact page, and the About page, we used an Apache server.
